KEY DISCREPANCIES & OBSERVATIONS

- 1. **Paywall Problem:** ycharts.com, gurufocus.com, and advisorperspectives.com all require subscriptions for current data. This significantly limits secondary verification.
- 2. **HY Spreads Extremely Tight:** At 2.86%, high yield spreads are in the “Calm” regime (3-5% per Eco3min). Historically, 82% forward 12-month returns are positive from this level, but risk of reversal exists.
- 3. **Margin Debt Elevated:** \$1.253T is historically high, though declining from peak. 36.49% YoY increase suggests speculative activity.
- 4. **Real Yields Positive:** Estimated ~2.10% real 10-year yield is restrictive for equity valuations.
- 5. **Data Access Limitation:** Many metrics require paid APIs (Bloomberg, FactSet) or specific data feeds not accessible via web scraping.

RECOMMENDATION

For comprehensive verification, consider: - API access to FRED (free) for macro data - TradingView or similar for technical breadth metrics - Direct CBOE API for options data - FactSet/Bloomberg terminal for institutional-grade data
